

# AGRI-SWEET

## **DESCRIPTION**

Agri-Sweet is a sweet taste supplement that improves the acceptance of all animal feeds.

## **APPLICATIONS**

Agri-Sweet is a special mixture of natural and artificial sweeteners for blending into animal feeds to make them more palatable and acceptable. It is especially valuable in calf and pig starter feedstocks.

## **FEATURES AND BENEFITS**

Agri-Sweet is an inexpensive alternative to standard sweeteners. One pound of Agri-Sweet replaces the sweet taste of approximately 100 pounds of sugar. It blends well into all feed mixtures and allows for a wide variation in feed ingredients, in addition to being easy to use.

## **RECOMMENDED FEED BLEND**

Use 1/2 to 2 pounds per ton of feed to achieve the sweetening effect of 50 to 200 pounds of sugar.

## **INGREDIENTS**

Agri-Sweet is a blend of rum, maple, anise, other natural and artificial flavors, natural and artificial sweeteners, roughage products, attapulgite clay, and TBHQ (to preserve flavor).

## **APPEARANCE**

Agri-Sweet is a finely textured, off-white, free-flowing granular material.

## **COMPATIBILITY**

It is safe and effective with all ingredients normally used in animal feeds.

## **PURITY**

It is manufactured and sold in strict compliance with the U.S. Food and Drug Administration's standards for purity and quality.

## **PACKAGING**

Standard packaging for dry-formulations is a 50-lb. Bulk bag. Products can also be packaged in a range of 1 to 2 ½ lbs. heat-sealed packets upon request.

For further details, consult your Agri-Flavors representative or call the factory direct.

\*Optional packet sizes available upon request.
