

FAT SURFACTANT

DESCRIPTION

Fat Surfactant improves the handling of all fats and oils used in animal feeds.

APPLICATIONS

Fat Surfactant alters the properties of fats and oils to speed mixing, insure good protein dispersal and prevent caking.

FEATURES AND BENEFITS

Fat Surfactant allows more fat to be used in formulations for higher protein values, improves the texture of the finished product by preventing balling and caking, keeps your equipment clean, speeds mixing and makes fats easier to handle through a wide temperature range.

RECOMMENDED FEED BLEND

Use 4 to 6 ounces per on of fat for effective results.

INGREDIENTS

Fat Surfactant is a blend of fatty esters, propyl alcohol and propylene glycol.

APPEARANCE

Available in liquid forms only. A light-colored solution that is highly soluble in fats used in the animal feed industry.

COMPATIBILITY

It is safe and effective with all ingredients normally used in animal feeds.

PURITY

It is manufactured and sold in strict compliance with the U.S. Food and Drug Administration's standards for purity and quality.

PACKAGING

Liquid formulation is sold by the pound and available in quantities from 50 to 425 lbs. All containers are clearly labeled by product name, ingredients and recommended directions for use.
