

# MOLASSES SURFACTANT

---

## **DESCRIPTION**

Molasses Surfactant is a water-soluble agent which reduces the viscosity and surface tension of molasses, rendering it more flowable.

## **APPLICATIONS**

Use Molasses Surfactant in all your molasses that goes into feed mix formulations.

## **FEATURES AND BENEFITS**

Less than a pound of Molasses Surfactant treats a ton of molasses to make it more free-flowing, thus lowering the power requirements for pumping and mixing. It also provides a self-cleaning action in tanks, mixer, augers and other equipment surfaces where molasses is used. It controls caking, lumping and balling, promotes uniform blending, and allows more molasses to be used. It makes all molasses easier to handle, even in cold weather.

## **RECOMMENDED FEED BLEND**

Use 4 to 6 ounces per ton of Molasses.

Note: It is recommended that Molasses Surfactant be added to the molasses before unloading from tank, car or truck, as it disperses rapidly during agitation or flow.

## **INGREDIENTS**

Molasses Surfactant is a blend of fatty esters, propyl alcohol and propylene glycol.

## **APPEARANCE**

Molasses Surfactant is a clear, amber liquid.

## **COMPATIBILITY**

It is safe and effective with all ingredients normally used in animal feeds.

## **PURITY**

It is manufactured and sold in strict compliance with the U.S. Food and Drug Administration's standards for purity and quality.

## **PACKAGING**

Liquid formulation is sold by the pound and available in quantities from 50 to 425 lbs. All containers are clearly labeled by product name, ingredients and recommended directions for use.
